Protecting your business from cyber threats

Cyber security from the experts

The threat from cyber attacks is a very real problem that businesses face. **35% of UK businesses have lost data** in the last year as the result of a security breach - and **60% of them will never recover from it.**

We are a leading authority in cyber security and data protection, helping businesses to protect themselves against all levels of cyber threat.

We offer a whole service solution to clients, addressing all **four** areas of cyber security for maximum protection:

01 TESTING

Cyber criminals look for weaknesses in a business' infrastructure that they can exploit. The key to cyber security is to detect those vulnerabilities before they do and take action to protect yourself.

Our expert and experienced team will assess your organisation and carry out professional testing to identify any weak points or potential threats to your infrastructure, which will be presented to you in a full report for analysis.

02 DETECT AND PROTECT SERVICES

Based on our extensive experience and expertise, we will form a set of bespoke recommendations designed to better protect your specific organisation and reduce the risk of a cyber attack.

When you are ready, we'll begin implementing products and services that will create a strong and secure infrastructure for your business with the right architecture, policies and processes to keep you and your data safe.

Cyber security is ever-evolving so we will continue to monitor your infrastructure for any new or emerging threats.

TRAINING AND EDUCATION

Ensuring your staff understand the importance of cyber security and their role in protecting the business is vital. Our awareness training courses cover all the key areas of cyber security and can be adapted for all levels of knowledge and understanding, ensuring everyone is up to speed on the latest issues and best practice techniques to maintain strong cyber security.

CERTIFICATION

We are proud to deliver the government's Cyber Essentials and Cyber Essentials Plus accreditation schemes to fully equip you and your staff with essential knowledge to protect yourselves from cyber security risks. The government wants every business to be Cyber Essentials accredited by 2020.

Having the Cyber Essentials badge will:
- Protect your business from most cyber threats
- Display your commitment to IT secvurity to customers
- Allow you to bid for government contracts

We support and guide businesses through the entire process to make certification as quick and easy as possible.

The only team you'll ever need for cyber security

Our one-stop package addresses all levels of cyber security, ensuring your organisation is thoroughly protected, removing any concerns over data loss, recovery costs and damage to your reputation.

As a Microsoft Gold Partner, Principality IT was built by data protection specialists who are leading authorities in their field.

Our cyber security services are at a far higher level than the general IT support you may be receiving. From global viruses to ransomware attacks, we are here to protect you. We unleash a powerful and proactive cyber security culture that prevents any weak link from undermining your entire operation.
